

AutoTori — Sprint 2

Team: Aakash, Duy, Ridhi, Sam

1. Alignment with Sprint 1 Prototype (Mandatory)

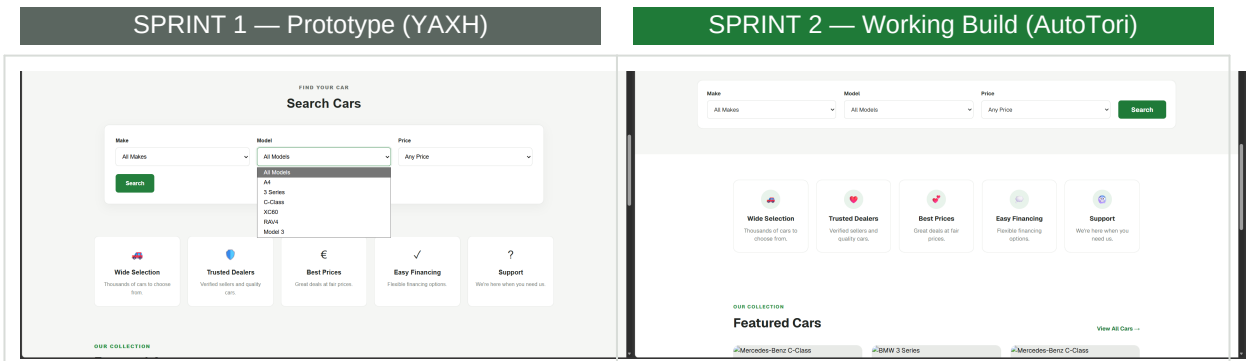

Sprint 2's working build (AutoTori) was developed directly from the Sprint 1 low-fidelity prototype (YAXH). The overall layout, structure, and core browsing/search experience were retained with high fidelity; the main evolution in Sprint 2 was turning static prototype screens into a working React application with new functional flows. The screenshots below compare matching sections of the Sprint 1 prototype and the Sprint 2 build.

Homepage — Hero Section

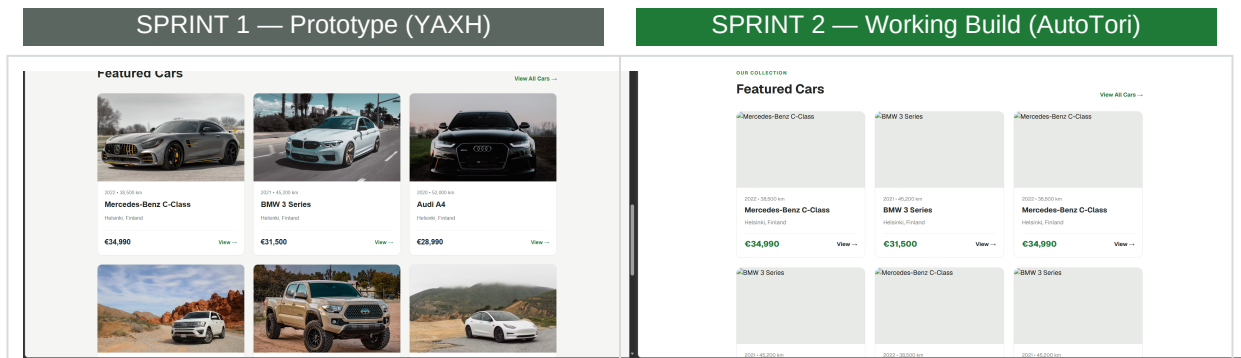

Identical hero layout, heading, tagline and CTA buttons. Only the brand name changed, from YAXH to AutoTori.

Search Cars Section

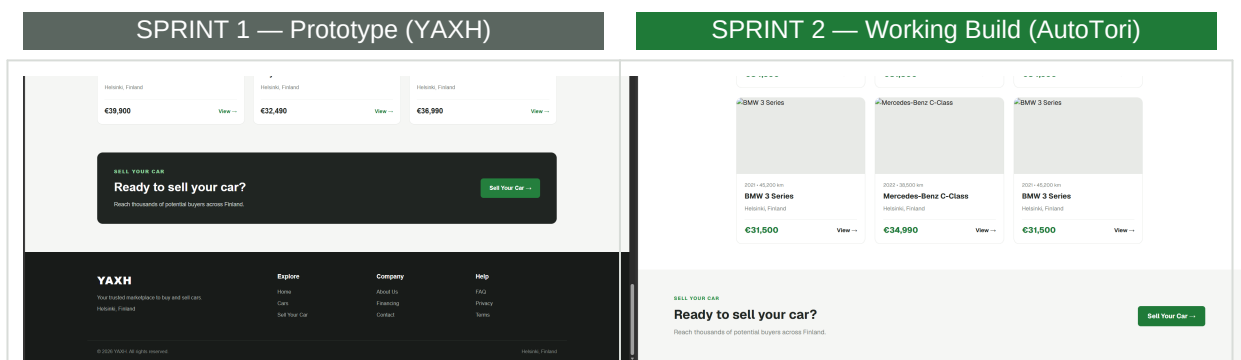

Make / Model / Price filters and the Search button are retained exactly as designed in the prototype, along with the five trust-building feature cards underneath.

Featured Cars Listing

Same car listing cards, layout and pricing style carried over from the prototype into the working build.

Sell Your Car — Call to Action

The closing call-to-action banner matches the prototype's copy, layout and button placement.

Summary of changes from the prototype

- **Branding:** project name changed from YAXH to AutoTori; all other visual design (colour scheme, typography, card design, spacing) was retained.
- **Navigation expanded:** Sprint 1's simple nav (Home, Cars, Sell Your Car, About Us, Financing, Contact) became a functionality-driven nav (Home, Create Account, Booking, Profile, Appointments, Offers), reflecting the new working features described below.
- **New functional pages built** that existed only as concepts in the prototype: account registration, login, profile management, appointment booking, a worker appointment dashboard, and a worker offer-review dashboard.

New pages added in Sprint 2 (no Sprint 1 equivalent)

These screens turn the prototype's planned user stories into working flows and did not exist as designed pages in the Sprint 1 prototype.
